

Corporate firewall device requires proper configuration and operation to maintain the security level. IIJA Managed Firewall service secures the customer's firewall by 24x7 monitoring and operation.

Service Outline

The service covers installation, 24x7 surveillance and operation of the firewall, but omits usage reports to provide the customer with a more affordable firewall outsourcing solution.

■ Customer Operations

- Decide firewall policy
- Decide implementation date for the setting change
- Physical tasks related to the firewall device (wiring, etc.)

■ IIJA Operations

- 24x7x365 monitoring
- Change policy settings
- Update system software
- Log operating history of firewall device

■ Option

- Cold standby

■ Device

| Firewall Device | DMZ Support | Network I/F | FW Throughput | Simultaneous Sessions |
|-----------------|-------------|-------------|---------------|-----------------------|
